

Orbit

for Android

WALKTHROUGH

INSTALLATION & REQUIREMENTS

Requirements

- A. Internet connection
- B. An Android phone device
- C. User account (feel free to also create a new account if you want):
 - a. Username: testuser
 - b. Password: password

Installation Instructions

From Phone (easier):

1. Go to settings, scroll down to security and select checkbox “unknown sources”
2. Download the Android Package File (APK)
3. Go to app drawer and click downloads
4. Open the file and install the app

From Computer (more difficult):

1. Connect android device to PC and enable USB mass-storage mode
2. Drag and drop file onto device
3. Use file manager (such as Astro or ES File Explorer), locate the file on the device and install it

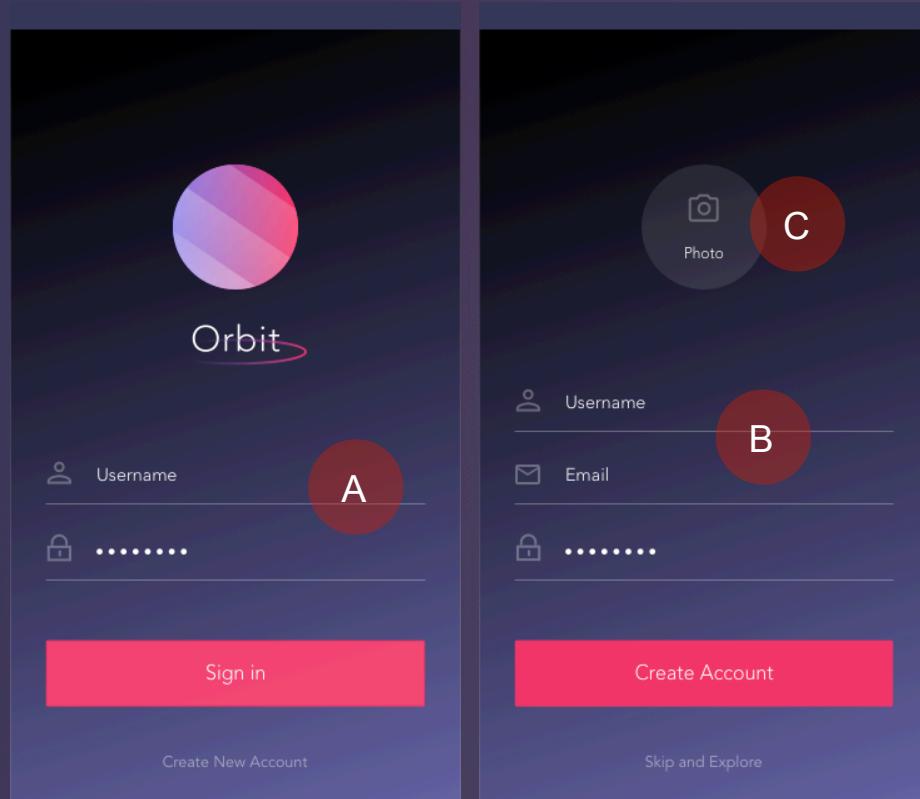

USER FLOWS, WALKTHROUGH

(It should be mostly self explanatory - some of the screenshots might look a little different from current build)
